Background

"Creating a 'Large Structures Composites Centre'

– a satellite of the National Composites Centre. We propose - with the National Composite Centre (NCC), the University of Bristol, the University of Southampton and drawing on support from Lloyd's Register and leading local companies and universities - to create a new satellite of the NCC in our area: the 'NCC – Solent Large Structures Composites Centre'."

Two Main Opportunities

Performance

Durability

- Strength
- Lightweight
- Reduced installation time
- Reduced thru life costs
- Sustainable (recycle carbon fibre)

Intelligence

Self-monitoring Self-reporting

Self-repair

Design envelope/ capabilities

- Large structures:
 - 100m x 30m x 10m ?
 - >200mm thick panels?
 - ~100 tonnes structures?
 - Bridges, beams, pipes, tanks, super-structures, modular cabins, nacelles, tidal blades, propellers, rail carriages & infrastructure, hulls.
 - Fabricate and assembly

Page 4

- Testing/Equivalence : Fire, Smoke, Toxicity, post impact strength
- Training
- Hybrid development *and* manufacturing facility?

NCC-SLSC: POSSIBLE SCOPE OF ACTIVITIES

Building 'straw-man' ideas

- Waterside access
- Rail access
- Large flexible space
- Testing facilities
- Office, meeting rooms
- Training space

Construction Theme: Bridge Manufacture, Assembly and Test

Inspection and mechanical testing area. NDT and component testing (fatigue/endurance).

Stores, small component testing, laboratory and freezer area. Cleanroom and oven shown but could be located adjacent to automated rail tool preparation area (slide 2)

Large scale pultrusion manufacturing equipment for extrusion of consistent section components.

NATIONAL COMPOSITES CENTRE

Prototype R&D production layout based on a foot-bridge component assembly scenario.

Overhead crane and laser projection assembly area. Providing fixture-less assembly process and methods.
